## Highly Cited Researchers have demonstrated significant and broad influence in their field(s) of research

Each researcher selected has authored multiple Highly Cited Papers™ which rank in the top 1% by citations for their field(s) and publication year in the Web of Science™ over the past decade. However, citation activity is not the sole selection indicator. This list, based on citation activity is then refined using qualitative analysis and expert judgment as we observe for evidence of community-wide recognition from an international and wide-ranging network of citing authors.

Of the world's population of scientists and social scientists, Highly Cited Researchers are 1 in 1,000.
